

The Asthma Right Care Slide Rule was developed as part of the International Primary Care Respiratory Group (IPCRG) Asthma Right Care (ARC) initiative, to stimulate conversations about over-reliance on short-acting beta2 agonists (SABA) to manage asthma, which is regarded as a global problem that goes unchallenged far too often.

The National Asthma Council Australia converted Asthma Right Care Slide Rule according to Australian compliance. Scan below for the Australia Asthma Right Care Slide Rule and Guidance Notes.

nationalasthma.org.au/living-with-asthma/resources/health-professionals/other/asthma-slide-rule-and-guidance-australia

The Guidance Notes provide potential steps and questions to ask when using the Asthma Right Care Slide Rule. Tailor it according to the person you are talking to.
